

2016 Fairbanks North Star Borough Services Revision

New additions or changes to the 2016 Standing Orders include :

1. **Medications-** Added Ketamine and TXA
2. **Airway Protocol-** Emphasized the need to continue using basic maneuvers if they are working, not go so quickly to intubation.
3. **IV Protocol-** Made Umbilical vein cannulation a Paramedic skill only.
4. **Behavioral Emergencies-** added Ketamine. Specifically, to avoid laryngospasm, IM Ketamine only will be allowed.
5. Added a **Hyperkalemia Protocol.**
6. **Neonate Resuscitation:** we changed the initial fluid bolus to match the recommended AHA doses. (this is to avoid over fluid resuscitation in the cardiogenic shock patient)
7. **Respiratory Distress:** CHF/Pulmonary Edema Adult Protocol: rearranged the administration of Nitro and CPAP Procedure so it flowed better.
8. **Seizures-** added IM Midazolam (Versed) for the treatment of the status epilepticus in the patient without IV/IO access. This is because Ativan and Valium have a much longer onset time in IM doses.
9. **Trauma:** Multiple Trauma Overview Protocol: added indications for TXA.
10. Attached the **Rescue Task Force Standing Orders** as an addendum to the appendix of the SO.
